

Wonderful Water

If we could mine all of the gold deposited under the seabed it is estimated that there would be enough to give every human on Earth 4 kilos each!

You could try to find out:

- how much gold is in sea water;
- where scientists believe there are gems and minerals in space;
- how much of the sea remains unexplored by humans.

Did you know that seven tenths of the world's surface is water?

- Use the Internet, non-fiction books or an atlas.
- Use blue to colour all the oceans and seas.
- Label each of the oceans and seas.
- Find out which is the deepest of the oceans and seas.
